PHP 4.1 or later (Free)

MySQL 4 or 5 (Community version is free)

Zend Optimizer 3.0 (Not required for developer)

## What others are saying about chemoventory?

Everything worked perfectly! Thanks to your help. Remember to send your invoice ... It was a pleasure doing business with you!

Thanks! -Adam

I really like the software ... The documentation is excellent indeed -- it helped me get the system working when even our IT people could not. Anyway I am eager to receive the full version. Thank you again for your detailed response.

I purchased the Academic version through paypal. I have had colleagues that have used your software before and I am really excited about using it for our school!

We're interested in getting rid of our clunky Access database we use now for chemical inventory, and the lite version of your software seems to be an ideal approach. We've got everything set up on the back end to handle your software already, too
